

COVID-19 surveillance report for renal centres in the UK

**All regions and centres -
1 September to 9 December 2020**

ABOUT THIS REPORT

These reports are produced by the UK Renal Registry (UKRR) using data submitted by renal centres in response to the COVID-19 pandemic. The first report was circulated on Friday 27 March 2020. The UKRR produced a summary report of the first wave (1 March to 31 August 2020) on 4 December 2020. Reports from December 2020 onwards only include data from the second wave, i.e. 1 September 2020 onwards.

The reports are primarily about adults aged ≥ 18 years, as well as young adults aged 16–18 years, if they are under the care of an adult renal centre. However, also reported in the key points are aggregate data submitted by paediatric renal centres.

The data collected are deliberately limited so as not to add significantly to the burden of work in renal centres.

DEFINITIONS

A renal patient with COVID-19 is:

- an individual who has a positive laboratory result for SARS-COV-2.

This definition was updated for the report on 28 October 2020 to reflect changes and variability in COVID-19 testing strategies across renal centres.

A renal patient whose death is attributed to COVID-19 is:

- an individual who died within 28 days of a positive laboratory result for SARS-COV-2.

This definition was updated for the report on 26 August 2020 following the introduction of the new UK-wide methodology to record COVID-19 deaths.

SUGGESTED CITATION & DISCLAIMER

UK Renal Registry (2020) COVID-19 surveillance report for renal centres in the UK: All regions and centres. The Renal Association, Bristol, UK.

Publications based on the data presented in this report must include the citation detailed above and the following disclaimer:

The data reported here have been supplied by the UK Renal Registry (UKRR) of the Renal Association. The interpretation and reporting of these data are the responsibility of the authors and in no way should be seen as an official policy or interpretation of the UKRR or the Renal Association.

KEY POINTS

For the week ending **Wednesday 9 December 2020**:

- **adult renal centres** – 49 of the 51 centres in England, 4 of the 5 centres in Northern Ireland and 5 of the 5 centres in Wales submitted COVID-19 data to the UK Renal Registry (UKRR). Cumulative data from 19 August to 30 November 2020 were included for 9 of the 9 centres in Scotland.
- **paediatric renal centres** – 13 of the 13 centres in England, Northern Ireland, Scotland and Wales submitted COVID-19 data to the UKRR.

The most recent 10 weeks of the pandemic in adult renal centres (RRT patients)

Over the last 10 weeks, all regions and countries have seen increased numbers of new cases, first in the northern and midland regions of England and then more recently in London, the South West, South East, East of England, Kent, Surrey & Sussex, and Wales. In nearly all regions, numbers have plateaued and are now falling.

In adult renal centres in England:

- in the last week (Thurs–Wed) the number of new laboratory-confirmed cases of COVID-19 was 150
- from 1 September to 9 December the cumulative number of laboratory-confirmed cases of COVID-19 was 2,265
- in the last week (Thurs–Wed) the number of new deaths attributed to COVID-19 was 43
- from 1 September to 9 December the cumulative number of deaths attributed to COVID-19 was 425.

In adult renal centres in Northern Ireland:

- in the last week (Thurs–Wed) the number of new laboratory-confirmed cases of COVID-19 was 3
- from 1 September to 9 December the cumulative number of laboratory-confirmed cases of COVID-19 was 51
- in the last week (Thurs–Wed) the number of new deaths attributed to COVID-19 was 0
- from 1 September to 9 December the cumulative number of deaths attributed to COVID-19 was 6.

In adult renal centres in Scotland:

- Scotland reported the cumulative number of laboratory confirmed COVID-19 cases and the cumulative number of deaths attributed to COVID-19 from 19 August to 30 November 2020
- from 19 August to 30 November the cumulative number of laboratory-confirmed cases of COVID-19 was 97
- from 19 August to 30 November the cumulative number of deaths attributed to COVID-19 was 17.

In adult renal centres in Wales:

- in the last week (Thurs–Wed) the number of new laboratory-confirmed cases of COVID-19 was 45
- from 1 September to 9 December the cumulative number of laboratory-confirmed cases of COVID-19 was 141
- in the last week (Thurs–Wed) the number of new deaths attributed to COVID-19 was 1
- from 1 September to 9 December the cumulative number of deaths attributed to COVID-19 was 17.

The course of the second wave of the pandemic in adult renal centres (CKD and RRT patients)

Figure 1 shows the cumulative number of laboratory-confirmed COVID-19 cases from 1 September to 9 December 2020 in adult renal centres in England, Northern Ireland and Wales. As can be seen, at the start of the second wave of the pandemic, the number of cases climbed steeply in all three countries, reaching a particularly high level in England, before plateauing in England and Northern Ireland over the past fortnight. In contrast, the number of infections in Wales has continued to climb, driven by positive tests in CKD patients.

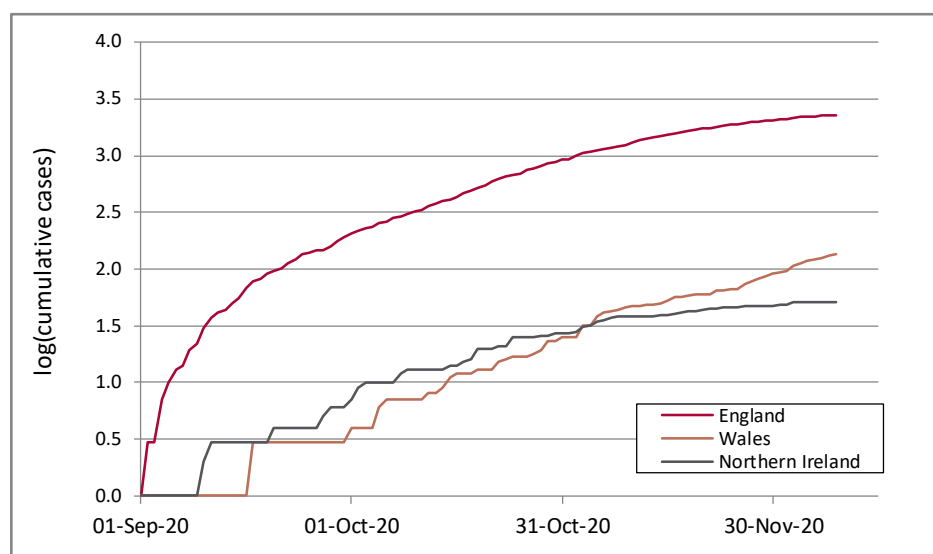

Figure 1 Log cumulative counts of laboratory-confirmed COVID-19 cases in CKD and RRT patients between 1 September to 9 December 2020 in adult renal centres in England, Northern Ireland and Wales

In paediatric renal centres in England, Northern Ireland, Scotland and Wales:

- in the last week (Thurs–Wed) the number of new laboratory-confirmed cases of COVID-19 was 1
- from 1 September to 9 December the cumulative number of laboratory-confirmed cases of COVID-19 was 26.

SURVEILLANCE

ALL REGIONS AND ADULT CENTRES IN ENGLAND, NORTHERN IRELAND, SCOTLAND AND WALES

Table 1 Number of new and cumulative reported laboratory-confirmed COVID-19 cases in CKD and RRT patients within the last 7 days (Thursday 3 December to Wednesday 9 December 2020) and from 1 September to Wednesday 9 December 2020, respectively, in adult renal centres in England, Northern Ireland, Scotland and Wales by region, renal centre and country

¹Data from University Hospitals Birmingham NHS Foundation Trust (Heartlands Hospital & Queen Elizabeth Hospital).

²The cumulative number of CKD patients with a positive test is high in Shrewsbury because of active testing in the community.

³Scotland reported cumulative cases from 19 August to 30 November.

Blank cells indicate that the renal centre did not submit data to the UKRR.

CKD – chronic kidney disease (i.e. patients with CKD not on RRT); HHD – home haemodialysis; HT – home therapies; ICHD – in-centre haemodialysis; PD – peritoneal dialysis; RRT – renal replacement therapy; TPLT – transplant; Missing – treatment modality data missing

Table 2 Number of new and cumulative reported deaths within 28 days of laboratory-confirmed COVID-19 in CKD and RRT patients within the last 7 days (Thursday 3 December to Wednesday 9 December 2020) and from 1 September to Wednesday 9 December 2020, respectively, in adult renal centres in England, Northern Ireland, Scotland and Wales by region, renal centre and country

¹Numbers of deaths attributed to COVID-19 are lower than in previous reports because the new definition restricts a COVID-19 death to one that occurred within 28 days of a positive test.

²Data from University Hospitals Birmingham NHS Foundation Trust (Heartlands Hospital & Queen Elizabeth Hospital).

³Scotland reported cumulative cases from 19 August to 30 November.

The delay between the NHS tracing process and producing this report may result in a possible underestimation of the number of deaths.

Blank cells indicate that the renal centre did not submit data to the UKRR.

CKD – chronic kidney disease (i.e. patients with CKD not on RRT); HHD – home haemodialysis; HT – home therapies; ICHD – in-centre haemodialysis; PD – peritoneal dialysis; RRT – renal replacement therapy; TPLT – transplant; Missing – treatment modality data missing

Table 3 Number of new reported laboratory-confirmed COVID-19 cases in RRT patients within the last 10 weeks in adult renal centres in England, Northern Ireland and Wales by region, renal centre and country

¹Data from University Hospitals Birmingham NHS Foundation Trust (Heartlands Hospital & Queen Elizabeth Hospital).

²The number of cases reported in the most recent week is likely to be an underestimation, because of the lag in reporting to the UKRR.

Blank cells indicate that the renal centre did not submit data to the UKRR.

CKD – chronic kidney disease (i.e. patients with CKD not on RRT); HHD – home haemodialysis; HT – home therapies; ICHD – in-centre haemodialysis; PD – peritoneal dialysis; RRT – renal replacement therapy; TPLT – transplant; Missing – treatment modality data missing
