## Appendix F: Proportion of Kidney PREM Responses for each Treatment Group by Centre

Tables F1-F5 below display the number of Kidney PREM responses received as a proportion of those patients registered at each centre for each treatment group. The UK Renal Registry only holds data for those patients who have received a transplant, or who are treated with dialysis, so all others have been excluded.

The Kidney PREM data was collected in the autumn of 2021, whereas the UK Renal Registry patient numbers were recorded at the end of 2020. In a survey of this type, 10-30% response is generally expected, so response levels above 30% are remarkable and below 10% are low.

Caution should be used when interpreting statistics where the absolute number of responses is less than 20 within any particular group, unless the centre is small such that the sample is less than one fifth of the patients in that centre.

Table F1: England

Region	Centre	Peritoneal		Home Haemodialysis		Centre/Satellite Haemodialysis		Transplant		Total

## Appendix J: Unit Abbreviations and Response Rates

Numbers in brackets in the “Unit/Satellite Location” column show the number of Kidney PREMs returned per unit (for reasons of anonymity, not including any units returning less than 10).

Numbers in brackets in the “Centre Abbreviation” column show the number of completed Kidney PREMs per centre, which is the basis for this report.

In centres marked with an asterisk, unit responses do not add up to centre responses because at least one unit returned less than 10 Kidney PREMs, and so are not identified in the unit level data but are included in the centre level data.
