

Recording Covid-19 Vaccination on Clinical Vision

Covid-19 vaccination can be recorded in one of the two manners . (Screen: Requests/Rx – Services / Immunisation Rx / Immunisation Log)

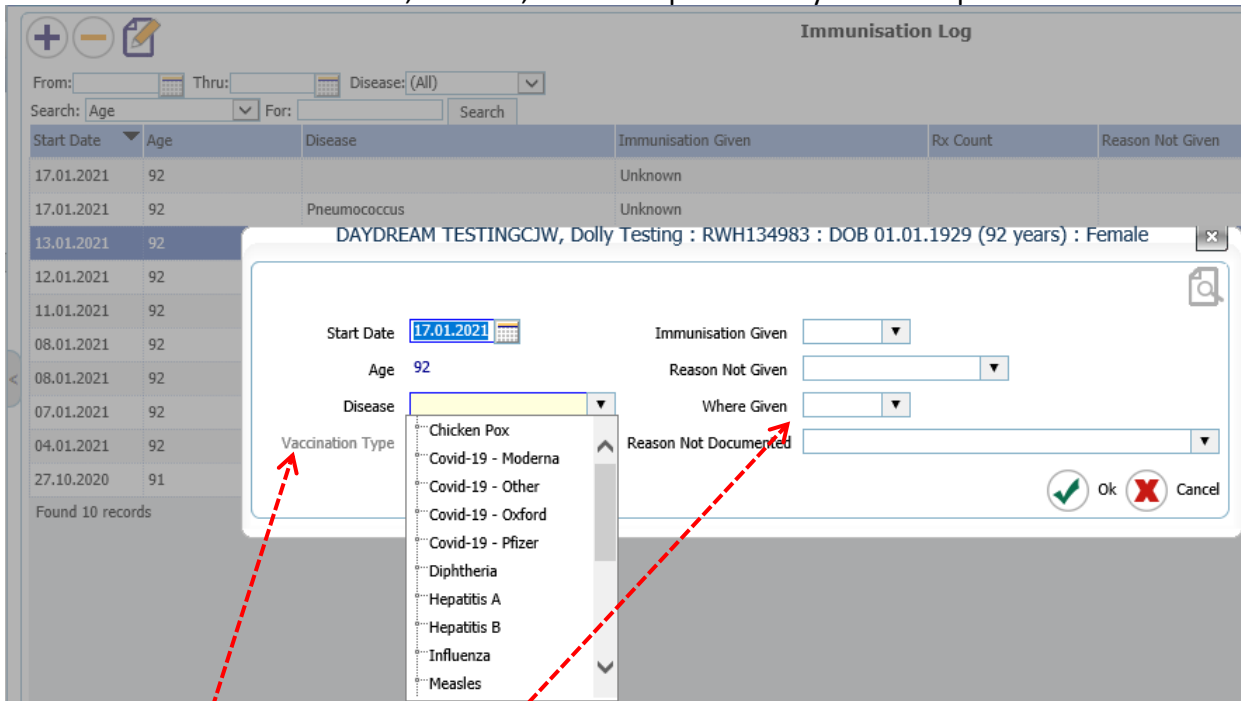

1. Record Vaccine administered per protocol/ standing order

For, this, you will need to add individual Covid-19 vaccines to your site drugs formulary.

2. Record historical/external vaccine administration

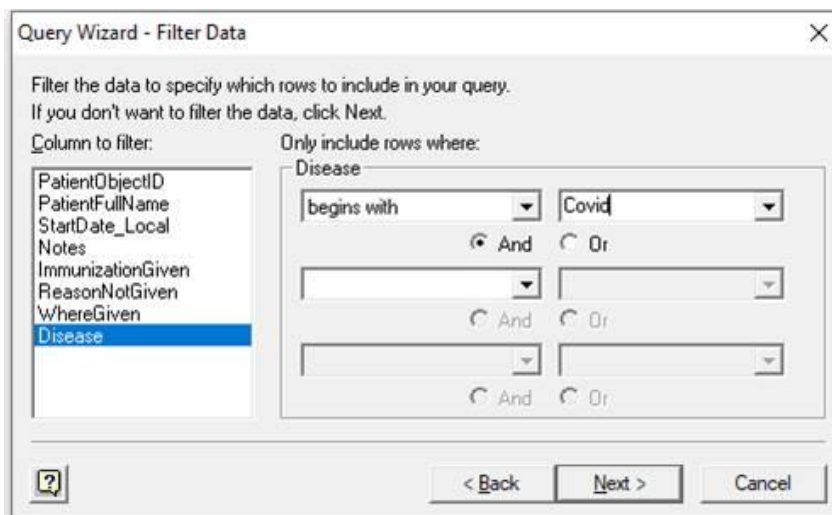

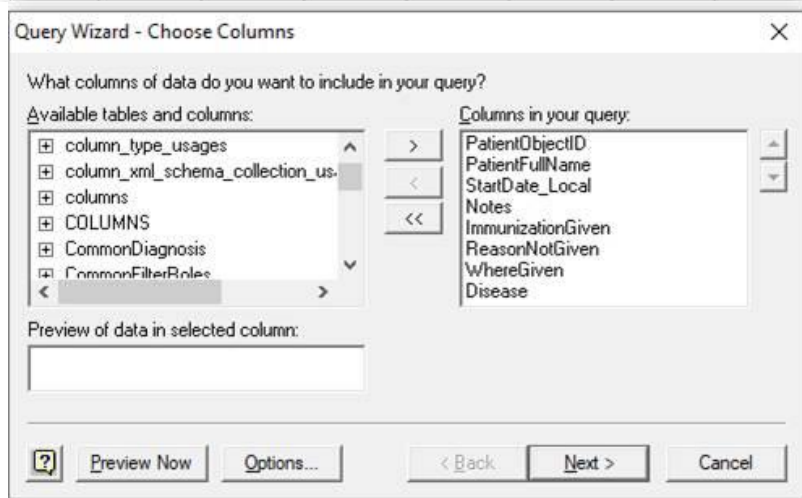

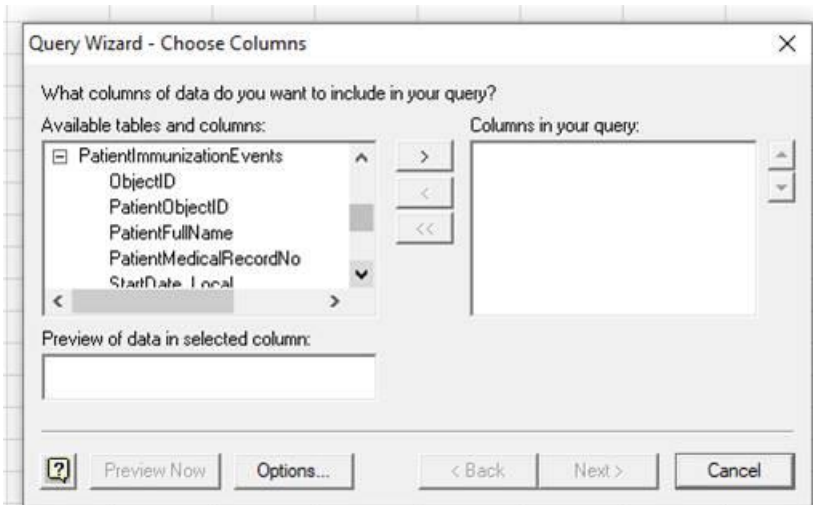

Since a number of patients will have vaccines administered in the community, or by non-renal staff, and also for ease of data collection, at Lister, we have opted to only use this option.

Because 'Vaccination Type' is only available for Pneumococcal vaccine, I was advised by CCL to add 'Covid-19 - Pfizer' etc. as 'Diseases' in the code set manager. I have asked CCL change this label from 'Disease' to 'Disease/Vaccine'.

Important: In 'Where Given' record 'On Site' or 'Off Site'

Data Collection

Save the query for sequential data collection.

For any queries or comments on the way we are handling this at Lister, please email shahid.chandna@nhs.net
